

# Excel Power Distribution

[www.excel-networking.com/power](http://www.excel-networking.com/power)

Section 14

## Power Distribution Units

**Power Distribution Units (PDUs)** are an important and often overlooked part of an infrastructure design and installation. At their simplest they deliver the power required for the equipment within the rack, more advanced units can provide management information on power consumption and local environmental conditions such as temperature and humidity. It is important to consider the PDU requirement at the rack installation stage rather than as an afterthought at the equipment installation stage. Making sufficient provision for the power will ensure the longevity and best use of the rack.

PDUs can be fitted in various different ways within the rack: front; rear; horizontal rack mount; vertical side mount. This may be dependent on –

- Available space in the rack
- Position of equipment
- Position of the power input for specific equipment

What capacity and how many PDUs should there be? For a rack that will be dedicated for equipment consideration should be made for dual power supply. In this case at least two PDUs will be required to provide the primary and secondary power supplies. This is typical for data centre and high importance communication rooms. Where racks are used to serve smaller locations and house a mixture of equipment and cabling then the requirement may be less. However, as networks and installations evolve over time the requirements change.

There are a variety of types of sockets including IEC C13 & C19 type used throughout the world. Additionally there are country specific types, such as the UK (BS1363), Schuko and NFC French styles.

Excel has Standard, Monitored and Managed PDUs to suit all requirements.

**Please be advised that Excel's Modular Power Distribution Units have been discontinued. For further information, please speak to your sales representative or contact our team via email: [sales@excel-networking.com](mailto:sales@excel-networking.com)**

## Efficiency Measurements

The more energy that is used in a data centre (or other facility) results in higher bills. These account for major ongoing costs in operation. Efficiency measurements are required to establish the performance of the data centre. Depending on the organisation or current trends these can be carried out in many different ways. BS EN50600 lists a number of KPIs to measure the efficiency of a data centre, amongst them two of the simpler ones are PUE and DCIE. They make the same comparison expressed in different ways.

### Power Usage Effectiveness

Power Usage Effectiveness (PUE) compares the energy used directly for the computer equipment with the total power used in the facility. The calculation is a simple formula:

$$PUE = \frac{\text{Total Facility Energy}}{\text{IT Equipment Energy}}$$

*Total Facility Energy* is a measure of all energy used including that consumed by the IT equipment. This includes, measuring the energy consumed as electricity, gas etc. *IT Equipment Energy* only relates to the energy used for the direction operation of the equipment. All energy measurements must be in the same units (or converted), for example kWh (kilowatt hours).

The resulting number does not have units. The aim is to reduce the PUE, with a PUE of 1 meaning only the IT Equipment uses energy. The typical PUE is difficult to quantify. However, the aim should always to be below 2.

### Data Centre Infrastructure Efficiency

Data Centre Infrastructure Efficiency (DCIE) is the inverse of PUE and is expressed as a percentage. Therefore the formula is:

$$DCIE = \frac{\text{IT Equipment Energy}}{\text{Total Facility Energy}}$$

Using and recording the information that is supplied from the Excel Intelligent PDUs can help calculate the IT Equipment Energy usage, which in turn allows the PUE or DCIE to be calculated. Once the baseline figure is calculated steps can be put in place and the improvements may be measured.

## Excel Standard PDUs

The Excel Standard PDUs are available in a variety of sizes and socket types. The horizontal PDUs have the mounting brackets at the front to allow attachment to the 19" profiles. The vertical PDUs have the mounting brackets at the rear to allow mounting to single 19" profile, side supports or flat surface. Note that vertical PDUs are sometimes referred to as Zero U, due to mounting outside of the vertical equipment mounting rails.

A range of input connectivity plugs are available to support different installation environments. The IEC 60309 "Commando style" plugs are utilised in Data Centres and other locations where the total current load for the PDU will exceed the standard domestic plug rating (UK BS1363, Schuko, French NFC. etc). It is becoming more common in rack installations to use either the C13 or C19 IEC output sockets. Within the range there are also PDUs with C14 and C20 Input Plugs so that a PDU may be connected direct to a rack mounted UPS (Uninterruptible power supply).

## Excel Intelligent PDUs

### First in class industry innovation

Excel Networking is a leading provider of high-quality, customized rack power distribution units (PDUs), and related power solutions to meet the unique needs of demanding Date Centre environments and Computer Rooms worldwide. The new IEX PDU has been designed according to the latest global standards and using the latest technology to provide you with the industry's highest availability and smartest power monitoring distribution.

### Full capacity all the time

The new IEX socket is a combination of IEC 320 C13 and IEC 320 C19 sockets that allows you the full usage of the PDU, all of the time. If you change or upgrade the rack equipment and it means different input plugs, no problem. The IEX socket accepts the IEC 320 C14 and IEC 320 C20 plugs from your servers or UPS to any outlet socket on the PDU.

### Features

- IEX (C13/C19) all in one combo socket makes the PDU the most versatile, coping with any combination of C14 and C20 plugs.
- PDU cascading allows full control of up to 16 PDUs from one Primary/Master PDU, simplifying the number of IP addresses required.
- Multi-colour OLED illuminated screen display offering high contrast power usage and alarms.
- Built with high-temperature grade components to allow safe and reliable operation in hot 60°C (140°F) environments.
- Alternate branch wiring on 3phase systems helps power load balance.
- Full outlet control for remote On/Off or a timed reboot individual outlets or group of outlets to improve the operation uptime.
- Dual 1GB ethernet port for third party access to the PDU.
- IEX lock standard power cord retention and P-Lock and V-Lock power cord compatibility.

**Energy Efficient Latching Relays**

Uses energy efficient bi-stable latching relays. These relays consume up to 70% less energy than alternatives, making outlet switching safer and configured in such a way that the outlet power distribution is always maintained.

**P-Lock & V-Lock Compatible outlets**

**Secure Locking Outlets**

EXCEL intelligent rack PDUs are equipped with lockable outlets preventing power cords accidentally coming unplugged due to human error or vibration.

**DCIM Compatible**

**Interoperability with third party software**

If you need to centrally manage all PDUs in your data centre we offer all communication protocols. Our solutions offer the option to communicate the status of rack-level power and environmental information to any third party Datacentre Infrastructure Management (DCIM) solution

**OLED display**

Shows Input power parameters and scroll individual outlet (V,A,PF,W,KWxH). Screen turns its orientation according PDU position.

**Field-Replaceable Controller**

**Field-Replaceable Controller**

The hot-swappable onboard controller, ensures that servers will never experience downtime when maintenance in the Data Centre is required and ensuring the infrastructure will never be obsolete being update ready.

**Accurate Environment Monitoring cascading sensors EMD**

The sensors benefit from the latest, most high-tech metering components, delivering the highest metering accuracy for temperature and relative humidity. Each sensor is built with 2 additional digital input contacts for (water leak, door contact, motion, vibration, smoke and any other sensor with normally open or closed). Sensors can be deployed in cascade up to 8 EMD sensors using network cables.

**Power Share Fail Over**

**Power Share Fail Over**

Maintain the PDU sending alarms and network connectivity in case one of the PDUs in same rack loose power feed

**PDU Cascading Option**

In order to save on network ports and manage multiple devices from one IP address we offer the opportunity to daisy chain up to 16 PDUs using Cat5/6 cable.

**Redundant Network Connections**

**Redundant Network Connections**

World's first double Gigabit ethernet port PDU ensures monitoring reliability and allowing to be shared with Data centre management and end clients in one or two separate Networks

S14

**kWh Metering Accuracy**

Enabling precise allocation of data centre expenses with +/- 1% billing grade accuracy.

**Security**

**Security**

EXCEL PDUs support the most stringent security protocols in the market in order to prevent unauthorized access (256 bit AES encryption, Radius, SNMPv3, user permissions, SSHv2, SSL, HTTPS).

**High Outlet flexibility and alternating phase**

IEX socket is a UL and IEC tested combination of C13 and C19 outlet that accommodates either a C14 and or C20 plug. Alternating phase set up helps on power balance for three phase systems.

**Hydraulic-magnetic Circuit Breakers monitoring**

**Hydraulic-magnetic Circuit Breakers monitoring**

Built with highly reliable hydraulic-magnetic circuit breakers which are not affected by ambient temperature and support delay curves appropriate for IT-equipment. The PDU proactively monitoring the status of the breakers in order to prevent downtime due to server power supply failure or overloads, sending an alert for any high load that risk a tripped circuit.

**RCM Residual Current Monitoring Option**

By measuring current flowing in the ground wire, our residual current monitoring by BENDER™ reduces the risk of electric shock. PDUs equipped with residual current monitoring dramatically reduce the burden of regulatory auditing.

**Full Color Range**

**Full Color Range**

Coloured PDUs make it easier to reduce human errors, identify power feeds, lowering the risk of unplanned downtime, EXCEL PDUs are available in any RAL-colour.

## Leading in innovation

IEX PDU is manufactured with the the most advanced hot-swap, field replaceable SNMP IP controller. It is built with dual Gigabit Ethernet ports, an OLED full colour screen, cascading multi-sensor ports, enhanced security, sophisticated alarming and power monitoring across the whole power chain.

## Never get caught out by changing outlet requirements for equipment changes

The new IEX socket is a combination of the C13 and C19 outlet standards that gives the maximum flexibility with the ability to hold both C14 and C20 plugs.

Fully patented and backed by IEC/EN and UL safety certifications it brings reliability in design.

## IEX removable locker for C14 plugs and lockable power cords for C20 plugs

The IEX Lock-VP is a removable component that makes standard C14 plugs lock securely. The C20 Socket design has built in locking compatibly as standard with P-LOCK and V-LOCK plugs.

# Flexible Environmental Monitoring With Smart Sensors EMD31

The new EMD31 is an environmental monitoring device that allows you to monitor temperature and humidity and status for 2 digital input sensors such (water leak, door contact, motion, vibration, smoke and any other sensor with normally open or closed).

Sensors can be deployed in cascade up to 8 EMD sensors using network cables.

## Excel Desktop Power Distribution Units

Excel **Desktop Power Distribution Units** offer a convenient addition to the work place. Available with either UK or Schuko power sockets and options for 6c apertures to accept data outlets and USB power in a stylish anodised aluminium finish, the PDUs are easily fitted to the desktop with the supplied clamps.

The Excel Desktop PDUs eliminate the need to scramble under the desk to connect up laptop and other power supplies. With the option of the 6c Apertures and the USB power points it increases the flexibility of any work area for the resident or casual occupant.

The USB outlets supply up to 2.1 amps permitting phones and tablets to be charged. An illuminated master power switch is fitted to each PDU. The power leads are supplied separately to ensure that the correct length is selected.

### Features

- Desktop mounting
- UK or Schuko Power Sockets
- USB Power Option
- Removable Power Cord
- Optional 6c Apertures
- Illuminated Master Power Switch
